ERDC
Engineer Research and Development Center

Problem Statement

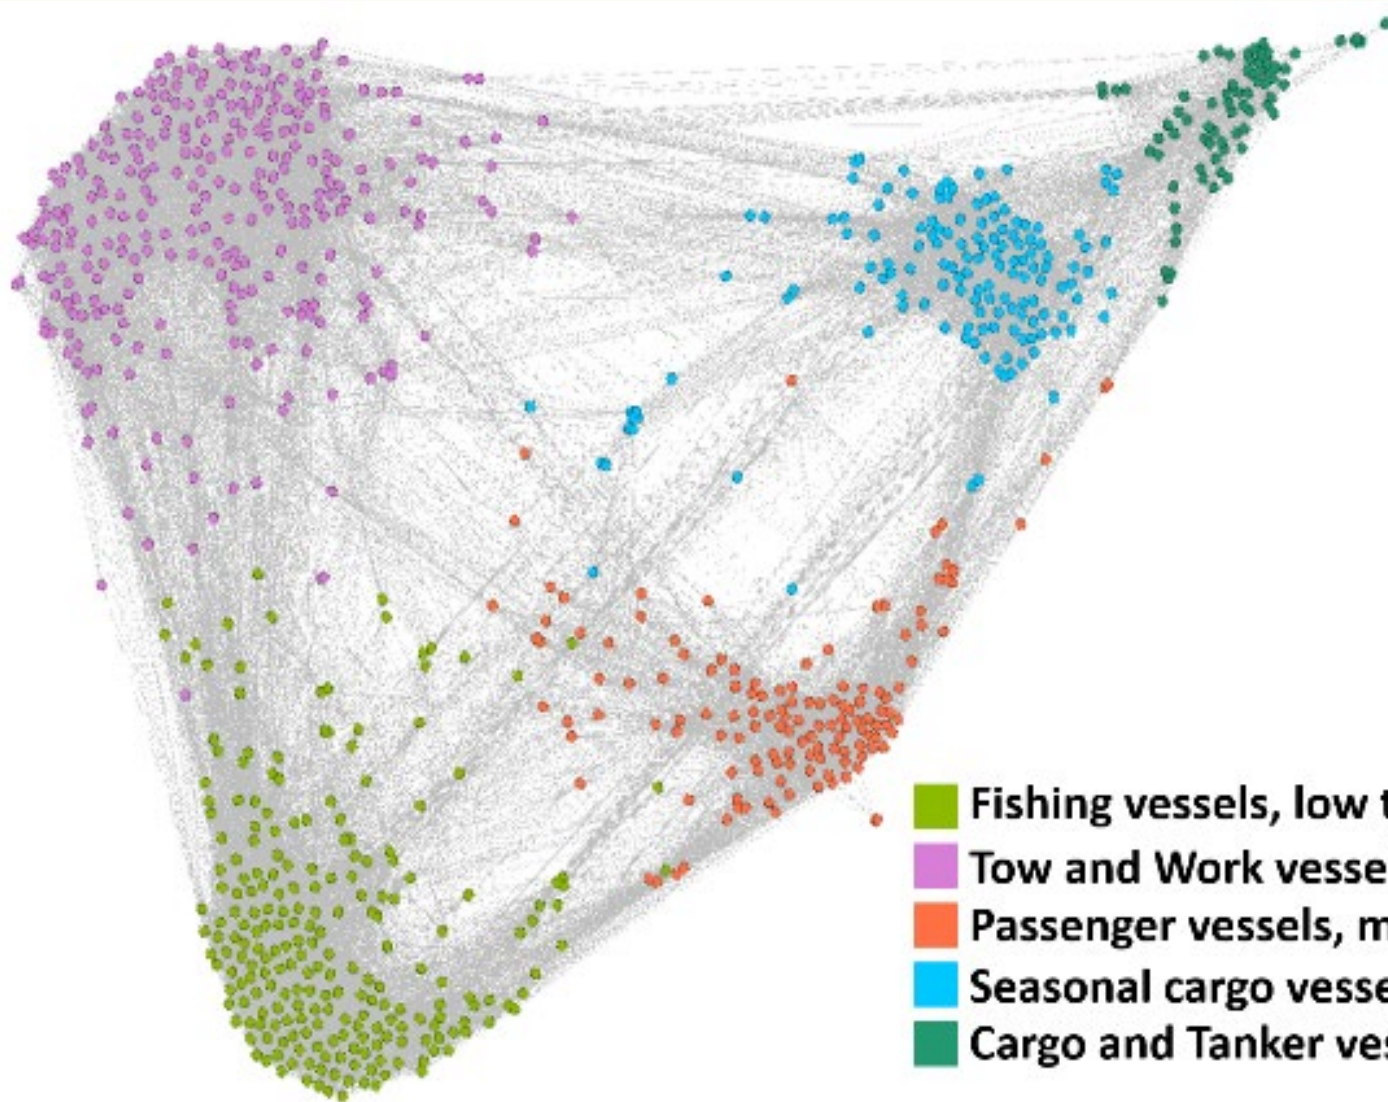

- USACE currently maintains nav. structures using subjective/qualitative performance metrics and prioritizes them with proxy measures of project use (tonnage, cargo value).
 - Augment this with quantitative metrics derived from AIS data.
 - Cast structure performance in terms of vessel activity for navigation structures.
 - Formulate management metrics at “portfolio scale”.

■ SoN's:

- 2017-N-52 Further Development of CPT and AIS software products
- 2016-N-14 Long-term modeling of coastal structure functionality
- 2015-N-15 - Integration of national and local monitoring datasets to support navigation and operations projects
- 2015-N-34 - Incorporating methods to evaluate length of navigation channel required for safe and efficient travel of two way traffic in ship simulations
- 2015-N-38 - AIS investigation of Dredge Behavior
- 2015-N-40 - Reducing the need for dredging

Capability and Strategic Impact Statement

Advance **objective**, **quantitative**, and **systems-based** approaches to management of the Corps' large coastal navigation portfolio of projects.

Why this matters.

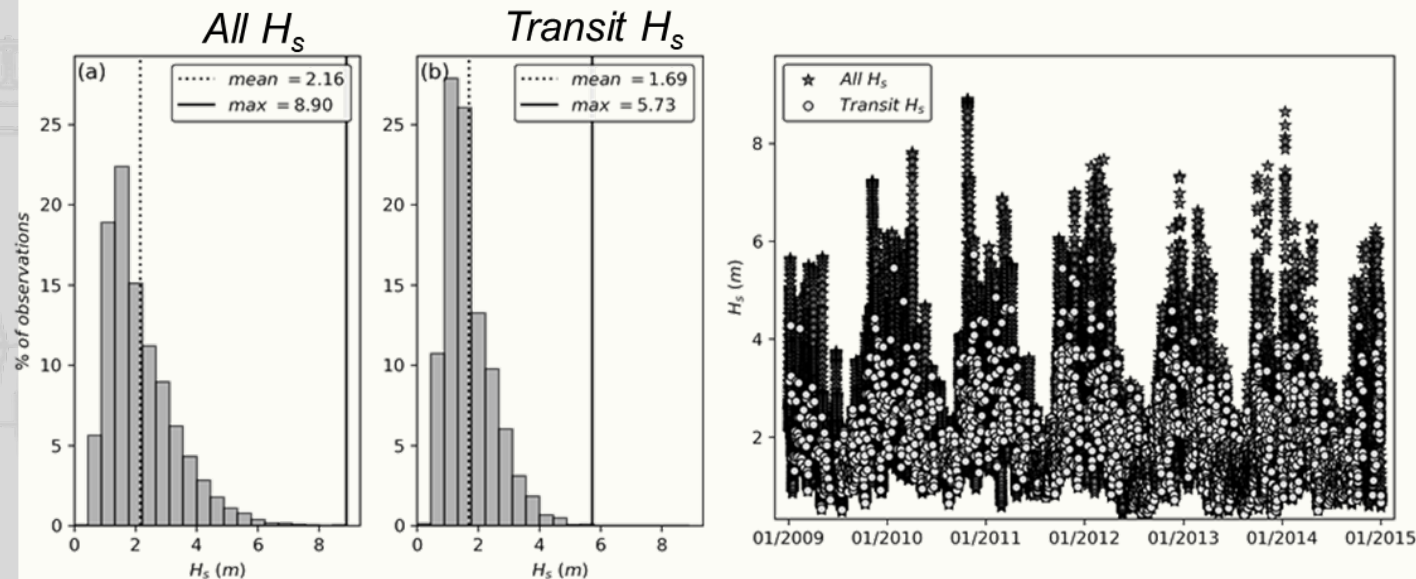

- **Money:**
 - USACE does not have enough to maintain all structures and dredge all channels.
- **USACE has spent ~\$47M per year on Jetty maintenance/repair/construction:**
 - The average maintained HMTF project (~521) costs \$~1.9M annually.
 - ~541 HMTF projects are not maintained.
 - 10-year coastal structure expenditure \approx 24 HMTF projects.
- **MCR Repair costs (\$257M):**
 - Project BCR: 1.1
 - MCR Repair Costs \approx 25% annual USACE dredging budget.

Improved Metrics

- Adding metrics related to environmental variables:
 - Vessel activity near structures correlated with wave height (WIS).
 - Activity near structures correlated with water level (NOAA gage data).
- Adding structure condition metrics:
 - Not objective but describes structure condition and consequence of failure.
 - CNS OCA Level 1 Screening Tool.

Grays Harbor N. Jetty

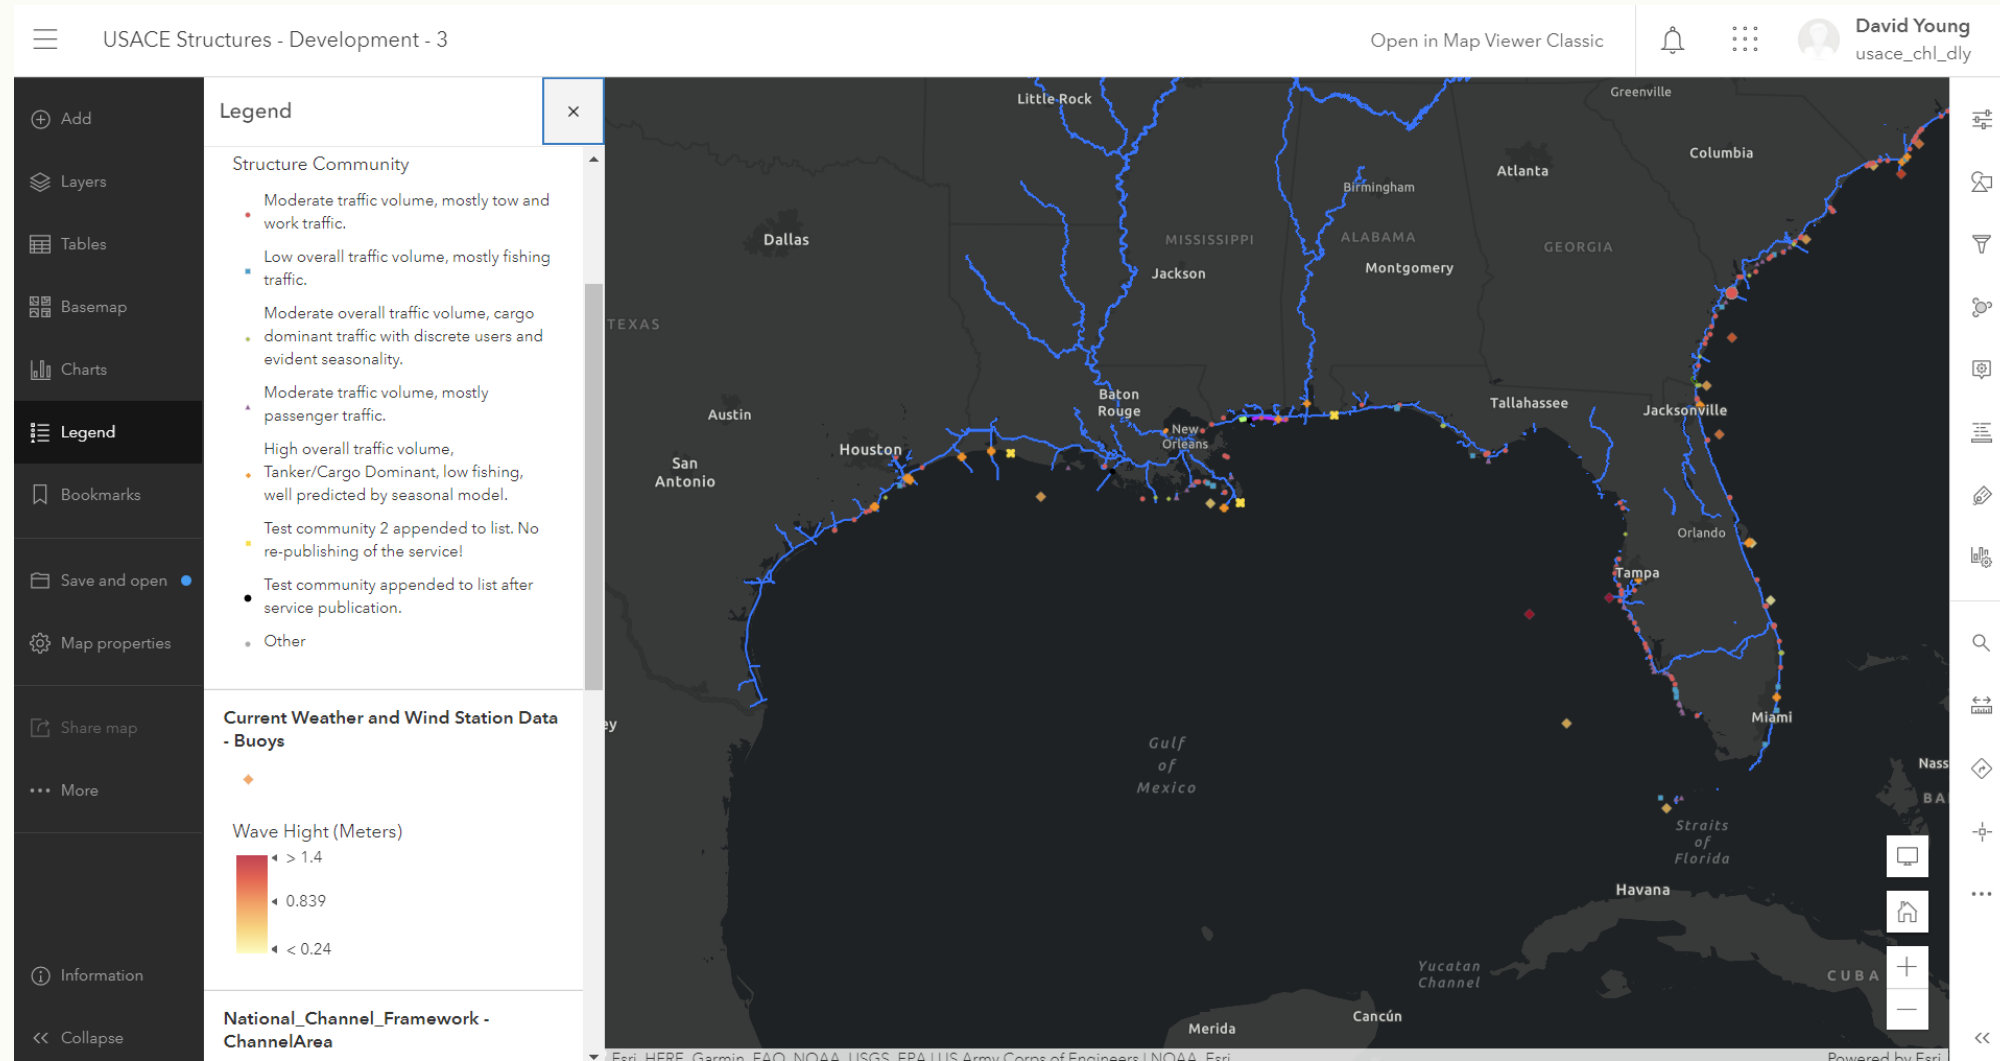

Sag Harbor Breakwater (2 sections), New York

Construction of Map Viewer (1)

- Demo from CofC.
- Charlene is constructing in-house map viewer.
 - <https://usace.maps.arcgis.com/apps/mapviewer/index.html?webmap=59cdf756765a4ef3ac576c70024840b8>

Automation

- Auto-acquire NOAA Tide Gage Data.
- Auto-match structures to WIS stations, NOAA stations.
- Migrate community detection to Python scripts (Candice)
 - Each Structure gets a score for 20 features
 - Pearson Correlation of Navigation Structures (865x865 dense matrix)
 - r-Neighborhood pruning (865x865 sparse matrix)
 - Label Propagation Community Detection Algorithm

Summary

FY21 Major Advances in Capability

- Major improvements to metrics.
 - ▶ Environmental Conditions.
 - ▶ Structure Condition/Consequence.
- Map viewer for data products.
- Automation of multiple processes.

FY21 Major Products & Collaborations

- ArcGIS Map Viewer
- District/Division Webinar (4/14/2021)
- CIRP TD (7/27/2021)
- CofC College of Computing
- Outstanding Journal Publication at FY21 CHL Town Hall.

Planned Outyear Products/Advances

- Rerun with more structures, more years of data.
- Additional automation.
- Prepare for transition to cloud – migrate to gitlab.
- 2nd Journal Publication.
